

Sequence

Attach parts to left and right side of fuselage. Attach each sub assembly (1-5) one at a time in order into left side of fuselage, placing (not gluing) the right side to align the tabs. Wait till dry. Remove right side then attach next subassembly and repeat.

Important – Subassembly 5 may interfere with subassembly A, so attach A first, then attach subassembly 5 (It may be easier to remove the right tab.)

It was now that I attached the LEDs (show later) before you close the fuselage.
